SERVER RACK — COOLING SYSTEM

EFFICIENT COOLING TECHNOLOGY FOR THE MOST DEMANDING IT REQUIREMENTS

Innovative cooling technology for data centres

» Efficient cooling directly at the server rack — the heat generated is dissipated straight away at the control cabinet.

» Heat exchanger integrated into the door — space-saving integration without the need for an additional cooling unit on the rack.

» A constant temperature of 24 °C — ensuring reliable operating conditions for sensitive server and IT components.

» Plug-and-play cooling system — water connection and integrated fans allow for easy integration into the infrastructure.

» Making smart use of waste heat — the heated water, at over 50 °C, is available for other applications and for heat recovery.

» Suitable for demanding circuits — available in stainless steel as an option for open water circuits and seawater.
